

MXP Product Roadmap

A note regarding the roadmap

- This roadmap offers insights into ongoing innovation areas.
- Each initiative corresponds to at least 1 innovation theme.
- Our direction will evolve over time: we make no promises. An initiative may undergo several exploration phases before a complete feature is developed.
- Purchasing decisions should not solely rely on the information presented in the roadmap.
- This overview is not exhaustive but aims to provide a broad perspective on our ongoing projects.

Product innovation across six themes

1 Artificial Intelligence

Utilise AI to automate expense reporting, outlier detection, and predictive analytics.

3 Integrated & Connected

Seamless third-party integrations with HR, ERP, Accounting, travel OBT & TMC, credit card transactions, DMS & archiving, etc.

5 Insights & Analytics

Advanced reporting to gain actionable insights for effective spend analysis and cost management.

2 Expense Capture

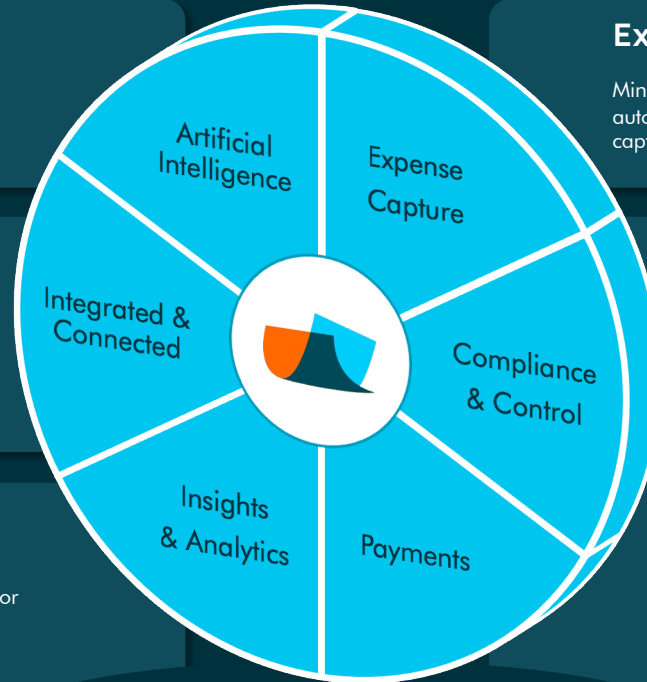

Minimal manual input using instant OCR and automatic data retrieval from various sources, capturing all relevant data automatically.

4 Compliance & Control

Ensure adherence to global regulations and internal policies for secure and compliant spend management.

6 Payments

Offer comprehensive integrated payment solutions to fully complete spend management for our clients.

And so much more...

Disclaimer: the information is intended to outline our general product direction. It is intended for information purposes only and may not be incorporated into any contract. It is not a commitment to deliver any material, code or functionality. The development, release, and timing of any features or functionality described for Mobilexpanse products remains at the sole discretion of Mobilexpanse. Last updated on 27 May 2024.

1. Capturing of CO2 drivers

Increasing requirement in Europe for companies to include the **disclosure of CO2 data** or to provide stakeholders with information on a company's environmental performance.

- We want to help with **identifying, recording, and reporting** the CO2 drivers. E.g. with employee commuting, business travel and accommodation services.

2. Travel request insights

We want to help organisations with more visibility for expected travel budget and expenses incurred. For instance, users can link travel requests to actual expenses. Users get to plan ahead by adding flights, car rental and accommodation.

3. SpendController performance improvements

Enhance the capabilities of our control automation tool to increase speed and ease of decision-making for our controllers.

- E.g: lower flagging sensitivity of spelling errors or multilanguage results.

4. Support EU e-Invoicing regulation

Support customers in complying with new EU e-Invoicing regulations by automating the processing and controlling of electronic invoices.

- Improve ingestion and control of expenses and invoices following e-Invoicing regulations for better integration with ERP systems.

5. Simplify processing of travel expenses

To ensure accurate calculation of a total trip cost for further reconciliation and settlement process.

- For instance: **Ingestion of BCD Travel's Travel Expenses** to improve the user experience by **automating** the process of adding of their travel expenses and receipt into MXP.

6. Improvement in Daily Allowances user experience

Modernise and simplify the user experience of our Daily Allowance module for all types of journeys.

- Fill and edit the form with ease, with guided steps throughout the way.
- Greater transparency of calculation information to empower end-users.

7. Ingestion of corporate cards transactions, powered by Pliant integration

Empower finance teams to manage corporate credit cards virtually through our corporate credit card partner Pliant.

- Scale and improve the handling of corporate card transactions in MXP by integrating with Pliant.
